

FIRE: THE FIRST-YEAR INNOVATION & RESEARCH EXPERIENCE

What is Machine Learning?

Using statistical and algorithmic techniques to give computer systems the ability to "learn" from data, without being explicitly programmed.

How is it related to AI?

Machine Learning is a subfield of AI that involves the use of statistical & algorithmic techniques such as neural networks and deep learning.

How can it be used?

Computer Vision

Natural Language Processing

Data Analytics

How is it done?

Large Datasets Open-Source Packages
Python Programming Cloud Platforms
Neural Networks Deep Learning Models

What will you do?

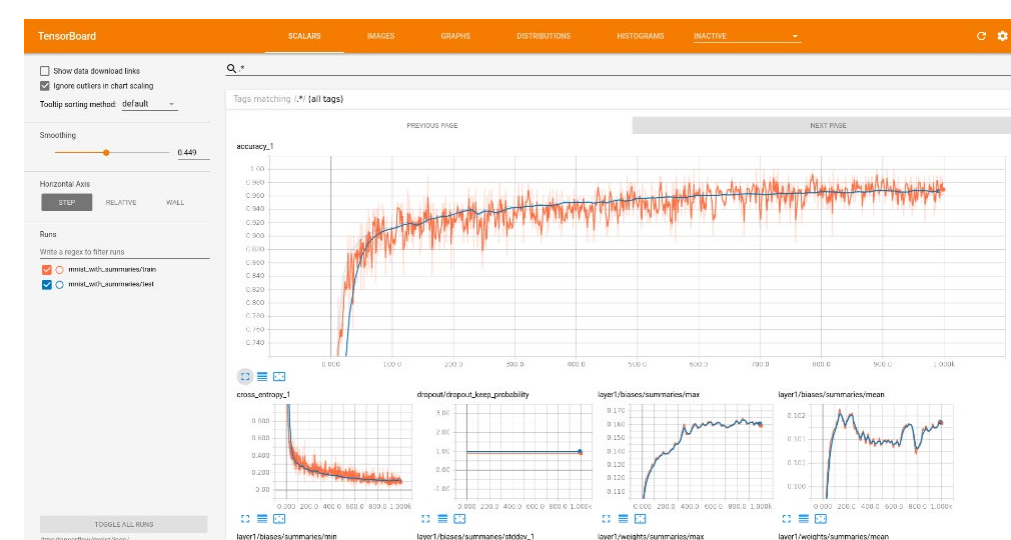

Data Preprocessing

- Gathering raw data
- Restructuring the data
- Correcting data errors
- Transforming the data
- Augmenting the data
- Sampling the data

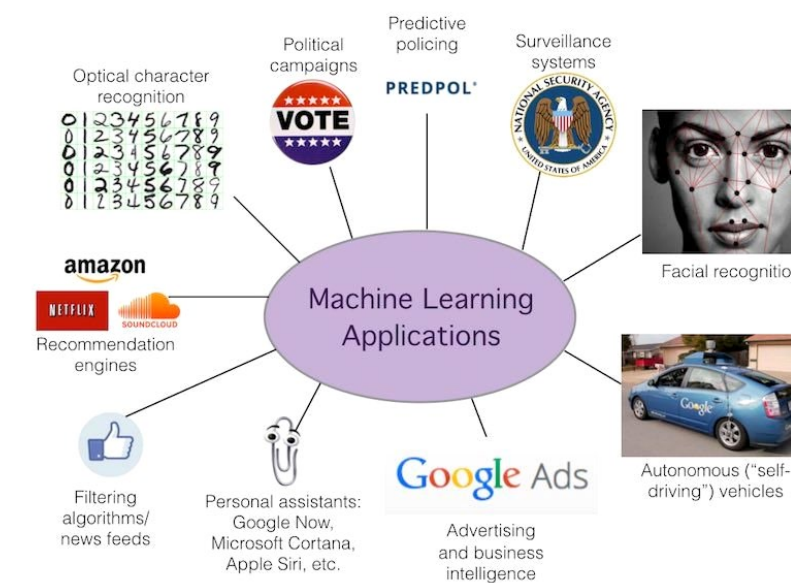

Training & Validation

- Composing the model
- Splitting the dataset
- Run training & validation
- Analyzing training results
- Evaluating with a test set

Optimization & Application

- Refining the parameters
- Improving the performance of your model
- Applying your model to the real-world

Our Cutting-Edge Tools

Why it matters?

- ✓ Recent growths in big data, computational tools, and state-of-the-art research.
- ✓ Machine learning applies to a wide variety of fields.
- ✓ Outcomes can lead to broad impact.
- ✓ Great career opportunities.

What will you learn?

- ✓ Analyze state-of-the-art techniques from recent scholarly papers and open-source repositories.
- ✓ Perform data preprocessing, training, optimization, and evaluation of machine learning models using deep learning frameworks (such as Keras, Tensorflow, and PyTorch).
- ✓ Collaborate with a peer research mentor and a team of fellow students to analyze, design, implement, and apply a machine learning model for real-world usage.
